

National Family Health Survey 2019-21

The Government of India, Ministry of Health and Family Welfare (International Institute for Population Sciences) has recently released national, state and district fact sheets on key indicators related to population, health and family planning based on the National Family Health Survey 2019-21 (NFHS-5). These fact sheets are in portable document format (pdf). These fact sheets need to be transformed into worksheet format to facilitate analysis of the data available through the latest round of NFHS.

MLC Foundation has converted the fact sheets released by the Government of India into worksheet format (xlsx) to facilitate analysis related to issues covered under the latest round of NFHS at national, state and district levels.

MLC Foundation and 'Shyam' Institute will be providing data for analysing fertility and family planning related indicators available from the latest NFHS-5, 2019-21 in the worksheet format. Papers based on the analysis of NFHS-5 data may be presented at the **Annual Bhopal Seminar 2022** which is being organised in January 2022.
